2021/ASP/32

Explanation of my part in our group project.

```
43
44      public void cancelTicket(int passengerID)
45      {
46          int indexToRemove = passengerIDs.indexOf(passengerID);
47          if(indexToRemove < 0)
48          {
49              System.out.println("Passenger ID not found!");
50              return;
51          }
52          int ticketsToCancel = bookedTicketsPerPassenger.get(indexToRemove);
53
54          tickets+=ticketsToCancel;
55          price-= 200 * ticketsToCancel;
56
57          System.out.println("Refund Amount after cancel : " + passengerCost.get(indexToRemove));
58
59          bookedTicketsPerPassenger.remove(indexToRemove);
60          passengerIDs.remove(Integer.valueOf(passengerID));
61          passengerDetails.remove(indexToRemove);
62          passengerCost.remove(indexToRemove);
63
64          System.out.println("Cancelled Booked Tickets Successfully!");
65
66      }
67
68      public void flightSummary()
69      {
70          System.out.println("Flight ID " + flightID + " --" + "Remaining Tickets " + tickets + " --" +
71          "Current Ticket Price " + price);
72      }
73      public void printDetails()
74      {
75          System.out.println("Flight ID " + flightID + "->");
76           for(String detail : passengerDetails)
77               System.out.println(detail);
78      }
79  }
```

44 : Create public method cancel tickets booked by a passenger ID

46 : Find the index to remove from all lists

54 : Increase number of available tickets

55 : Change price to new value after cancellation

57 : Calculate refund

59-62 : Remove details of passenger from all lists

64 : Print details about Cancelled Booked Tickets

68-72 : Functions to print details about flights

73-78 : Functions to print details about passengers
